

SUZUKI Omnichord

The Art of MAKING MUSIC Made Easy.

Model: OM-300

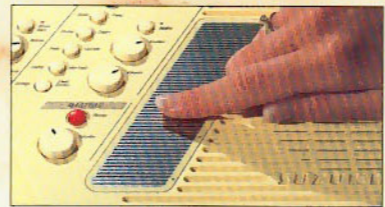

It's true, making music is an Art...
... traditionally demanding years of study and practice to be successful—until now! Enter the new Suzuki Omnichord. If you can read this brochure, you can play the Omnichord, and play it well. There's no need for lessons or years of study to play and sing your favorite songs right now! Just press a chord button and strum the SonicStrings. It's that easy.

Add dimension to your playing with 10 on-board rhythm, bass and drum styles that compliment the chords you're playing... automatically. You can't make a mistake! Select from 10 SonicString voices that perfectly fit your song.

We've designed the Omnichord with a technology that enables you to make your music sound great the very first time you try... musician or not!

Easy play features are sophisticated, too.

Our unique technology answers the demands of the accomplished musician. Sophisticated and versatile features like chord memory, a two-octave melody keyboard and MIDI interface are just a few of the new Omnichord functions that musicians have come to expect from today's exciting electronic musical instruments. Compact (less than 4 pounds), completely portable, battery powered with built-in sound system, Omnichord shows you the art of making music, made easy.

Omnichord is the only musical instrument that can be strummed just like a guitar—electronically!

The Art of MAKING MUSIC Made Easy.

One finger chord play.
The Omnichord can play 84 chord combinations. You can accompany yourself and friends in any key as the Omnichord plays all the background instruments in major, minor, seventh, major 7th, minor 7th, augmented and diminished chords. Most popular music songbooks include the chord notation above the music and lyrics. With the new Omnichord and songbook, you can immediately sing and play any song you choose.

Express your chords with SonicStrings.

The 4-octave SonicStrings Strumplate is electronically programmed the instant you touch a chord button. Touch or strum the SonicStrings just like a guitar and hear a perfectly tuned chord progression every time. You can't make a mistake! And there's never any strings to tune or break.

Ten unique voices, digitally sampled.
We've built-in 10 carefully selected authentic CSM voices to fit the wide range of songs you'll be playing with your Omnichord. You can make your SonicStrings sound just like a piano in one song and instantly play guitar, strings or even steel drums for the next. Our new CSM voices faithfully reproduce every nuance of pitch, tone and duration.

Portable and built to last.
Plug Omnichord into your stereo or PA system for concert hall sound. The same output jack even powers headphones to play in private. Omnichord goes everywhere the music is with its built-in, battery powered sound system (batteries included) and durable, lightweight, sculptured body, constructed of unbreakable ABS plastic. Omnichord never needs tuning and has solid state components that will provide years of fun and dependable music making.

Ten exciting rhythm, bass and drum styles.
From rock to waltz, Omnichord has just the right drum, bass and rhythm section to back-up your songs automatically! You control the volume, tempo and style. Add a brief drum solo with the touch of the drum fill button. Even start your song with an exciting drum solo with a single button!

Omnichord remembers your music.
Omnichord can memorize the chords of your songs and play them back with the touch of a single button. This eliminates the need to search for every chord change during play. Memorized chords can be played back with an optional foot control. Focus on the SonicStrings, play the melody keyboard or play a second instrument, with your personal back-up band behind you.

Play the melody in MIDI.
The included overlay transforms the chord section into a piano-like two octave, polyphonic, chromatic keyboard. In the melody mode Omnichord provides you with 10 digital voices tailored for your melody keyboard, including the human voice. With the MIDI function, your Omnichord can utilize unlimited voices from other MIDI instruments. The possibilities are endless!
